Quantify Terminal

The analyst’s work, automated.

Runs 24/7 in the cloud on every holding in the fund. It fetches all market information, filings and news, micro and macro, direct and indirect, and links each event to the positions and theses it affects.

Two hours of analyst work per event, done in ninety seconds.

A filing lands. The analyst loses the next two hours.

Every fund gets the same news at the same time. The slow part is what comes after: working out which holdings it touches and whether the reason for owning them still holds.

Read

The number is on page 14.

A 40-page filing, an 8-K, a transcript. The line that moves the model sits in a footnote.

Update

Re-key it into Excel.

Formulas break. Version control is a filename. The audit trail is a folder of attachments.

Check

The thesis lives in memory.

Exposure sits in a second file, the rationale in a chat thread. Nobody can replay the decision.

2 hours per ticker, every earnings season, on model updates alone. It is repetitive, it never shows up in the P&L, and no terminal has ever done it.

Source: daloopa.com, November 2026. Daloopa’s own figure for time saved, not an independent study.

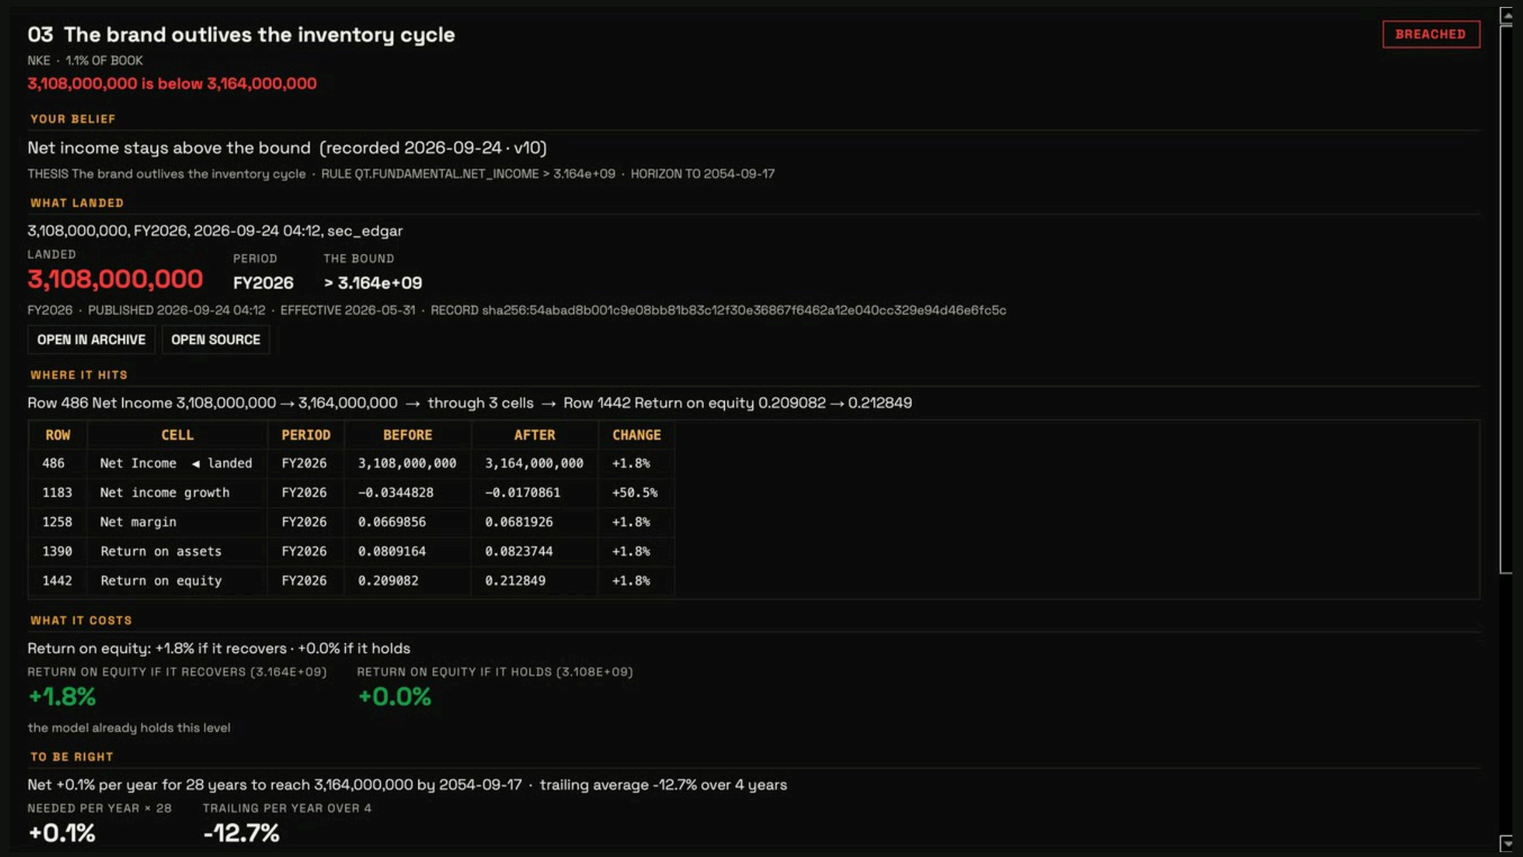

Always on over your book. Everything that lands is tied to what you hold.

What lands	What Quantify does	What the team sees
Filings and results	Reads it, sentence attached	Which thesis broke
Exchange announcements	Maps it to your positions	How much money is exposed
Macro prints	Proposes the model update	Proposed cells, each sourced
News and corporate events	Re-scores the thesis	One morning brief
Prices, ownership, estimates	Recomputes the exposure	A decision record, replayable

The AI only reads. Code does the math. A human approves every change.

Runs in the desktop app today. The always-on cloud runner is funded by this round.

The morning after a filing lands.

Working today

SEC filings into sourced model updates. Thesis health by book impact. Portfolio twin and scenarios. Decision replay. MCP server, SDK, Excel and Sheets.

Funded by this round

Model updates on Indian filings. Licensed live feeds. The always-on cloud runner. Code signing. Billing and team accounts. A hosted API.

Pre-incubated at IIT Jammu’s incubation council (I3C). Country count as of August 2026.

Reading became free. The investor’s own state is still updated by hand.

$600M

AlphaSense ARR at a $7.5B valuation, June 2026. Search over documents is now table stakes.

1 in 3

Bloomberg subscribers already use its AI assistant. The seat still costs $31,980 a year.

34.5%

The best model’s score on financial modelling. Chat cannot update a model on its own.

Each sells information or chat. None holds the analyst’s state.

Bloomberg + ASKB

~375k users

Chat over its own data, priced for banks.

AlphaSense

$600M+ ARR

Search over documents. Nothing reaches your model.

Daloopa

185+ clients

Its data into your Excel. No thesis, no record.

Rogo

$2B valuation

A banker’s copilot. Built for the deal, not the book.

Hebbia

$700M valuation

Document agents. Answers questions, keeps no state.

FactSet, S&P

260k+ FactSet users

Chat and spreadsheet agents over their own data.

OpenAI, Anthropic, Perplexity

Finance launches, 2025–26

General assistants. No gated commit, no record.

Koyfin, TIKR, Fiscal.ai

$25 to $299 a month

Terminals for individuals. No fund workflow.

Funding and prices from public sources, 2024–26. Hebbia’s valuation is from July 2024.

Why us

Point-in-time by construction.

146 fields, each stamped with when it became knowable, with a rights profile on every source. Incumbents would have to re-ingest a decade of filings.

A deterministic model compiler.

Cell-level updates with the source sentence, scored against 204 hand-read cells from 19 filings. The model reads. The compiler computes.

The decision record.

Model version, thesis version, evidence and time, replayable years later. It becomes the fund’s memory, and leaving means leaving it behind.

Built by the founders.

Seven months, one codebase, no outsourced core. We have visited 23+ funds to understand how the work is really done.

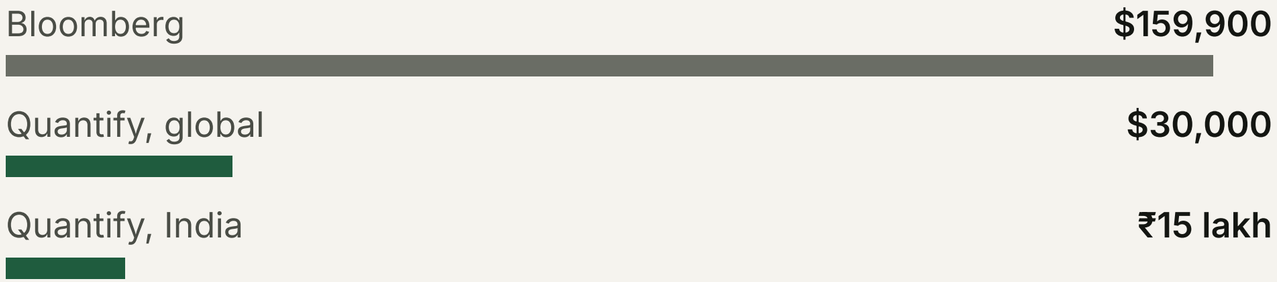

A seat the mid-market desk can afford.

Starting price, per seat

₹25,000

a month in India, ₹3 lakh a year. $6,000 a year globally. Billed annually, in advance.

Five seats, one year

Land

One desk, five seats.

Expand

The whole fund, the private library, agent access.

Compound

The decision record becomes the fund’s memory.

Data

The launch data plan is about ₹4.7 lakh a year. One fund covers it three times.

Bloomberg single-terminal list price, 2025–26. ₹95 to the dollar.

India first, because the buyer is on a public register.

Demo

On their names.

Founder-led, on the fund’s own coverage list and latest filings.

Pilot

Thirty days alongside.

Next to the current terminal for one earnings season. We measure hours saved.

Convert

One desk, five seats.

Annual billing in advance. The first fund covers the data bill.

Expand

The whole fund.

More seats, the private library, agent access.

6,332
firms mapped

6,679
named contacts

13
countries

Next after India

United States 636 firms, United Kingdom 201, Singapore 132, UAE.

Firm and contact counts from the Quantify register, October 2026.

The second line: the same point-in-time layer, sold to teams training financial AI.

Datasets

Stamped when knowable.

Nothing later than the task date enters.

Trajectories

Experts, recorded.

CAs, CFAs and ex-analysts at work in the terminal and Excel.

Environments

Scored, not graded.

An agent sees only what was public. A deterministic verifier scores it.

The demand is already visible

$2B

Mercor’s run-rate selling expert data, over 90% of it to AI labs

90%

of Databento’s revenue comes from large institutions and AI labs

$0.8–2.2B

estimated spend on finance-specific AI data in 2025

Pre-revenue. labs.quantifyterminal.com. Sources: Dealroom, Jun 2026; Databento, Jul 2026; Quantify estimate.

Labs: who buys, and what 2027 must prove.

Buyer	What they buy	Planned price
Frontier labs: post-training and evaluation	Expert traces, environments, held-out evaluations	$250k–$2M a programme
Banks and asset managers: model risk	Evaluation and evidence packs	$250k–$1M a year
Quant teams: builders of financial agents	Point-in-time datasets and environments	$50k–$500k a year

Q1

Open release of 100+ hours of expert trajectories.

Q2

Fifteen buyer interviews across labs, banks and managers.

Q3

First paid pilot: 500 authored tasks, about $100k.

Q4, the gate

No paid pilot by December: Labs folds into the terminal.

Planned prices, benchmarked to Mercor’s finance-expert rates. Not yet tested with a buyer.

The founders

Aaryan Saroha

Founder and Chief Executive Officer

Electrical engineering, IIT Jammu. Built the core systems: the point-in-time data layer, the model compiler, the thesis engine and the decision record. Leads product and engineering.

Jaswinder Saroha

Co-founder and Chief Operating Officer

Mathematics, with a long interest in quantitative finance. Founded HEMBIT, a consumer label, and ran it commercially. Leads strategy, operations and finance.

The twelve-month plan.

Quarter	Team	Paying funds	Paid seats	ARR run-rate	Spent to date
Q1 2027, ten pilots live	6	0	0	$0	$220k
Q2 2027	8	5	25	$100k	$455k
Q3 2027	8	11	55	$220k	$725k
Q4 2027	8	20	100	$400k	$1.0M

The seed

20 funds, 100 paid seats and a $400k run-rate open the seed round for Q1 2028.

The runway

Annual billing in advance adds about four months at plan.

The gates

A plan, not a forecast. Marketing and growth hires wait for ten live pilots.

ARR at ₹3 lakh and $6,000 a seat, a 70/30 India-global mix, ₹95 to the dollar. Team includes both founders.

$1M: twelve months, eight people, 100 paid seats.

Use of funds

People	68%	**$680k**
Legal, compliance, operations	9%	**$90k**
Data licensing	8%	**$80k**
